tailored polymeric materials for controlled delivery systems

During the last few decades, progress has been made in manipulating the architecture of synthetic polymer materials. However, the primary structure—that is, the sequential arrangement of monomer units in a polymer chain—is generally poorly controlled in synthetic macromolecules. Sat, 05 Jan 2019 19:15:00 GMT

Sequence-Controlled Polymers | Science - Orthotropic Polymeric Composites with Microstructure Tailored by Electric Field ... dielectric strength of most polymeric materials. Typical viscosities of polymeric melts are between 1 and 1000 ... Orthotropic Polymeric Composites with Microstructure ... - the most exciting and emerging class of materials [1-9]. One of the main groups of “smart” materials is based on polymers because they are cheaper and more easily tailored than metals or ceramics. These polymeric “smart” materials can respond to stimuli such as pH, temperature, ionic strength, electric or magnetic field, light and/or chemical and biological stimuli and consequently ...
